Personal Summary

Aspiring Gameplay Programmer skilled in Unity (C#) and Unreal Engine, with a strong foundation in game mechanics, debugging, and AI programming. Experienced in developing and optimising gameplay systems, collaborating in small development teams, and using version control tools such as Git and GitKraken. Passionate about creating engaging player experiences and continuously learning new technologies.

Skills

Languages: C#, C++, Python

Game Engines: Unity, Unreal Engine

Version Control: Git, GitHub, GitKraken

Soft Skills: Teamwork, Problem-Solving, Communication

Other Tools: Microsoft 365, Blender, Adobe Photoshop, Maya

Experience

Volunteer Teaching Assistant *College of North East London (Games Design and Development)* (2022 – 2023)

- Taught students Unity and C# programming, debugging, and optimising game code.
- Assisted in game design and programming lessons, covering mechanics, level design, and scripting.
- Provided guidance on troubleshooting errors and improving code efficiency.

Information Technology Service Desk Analyst *Greenwich University* (October 2024 – Present)

- Maintained accurate documentation of IT incidents and resolutions.
- Provided technical support to students and staff, diagnosing and resolving software/hardware issues.
- Collaborated with cross-functional teams to enhance IT infrastructure and support operations.

Projects

Coco's Treat Dash Itch.io / GitHub

- Developed core gameplay mechanics in Unity (C#) including player movement, treat collection, and level progression in a 3D, Pac-Man inspired environment.
- Implemented animations, sound effects, and responsive controls; contributed to game concept, terrain design, and UI icon creation.
- Collaborated in a team of 3, using Trello and GitKraken for project management and version control.
- Showcased at the Digital Shark Expo of Greenwich University.

Hellbound Escape Itch.io / GitHub

- Created a 2D dungeon crawler prototype in Unity, inspired by The Binding of Isaac, using object-oriented programming techniques.
- Developed custom enemy AI that patrols randomly and chases the player when in range; implemented unique item mechanics such as a speed-boosting screw, a healing potion, and boots that increase speed.
- Refined gameplay through iterative testing and feedback.

Dark Descent Itch.io / GitHub

- Developed a 2D Unity platformer where the player controls Lily to escape a monster-infested cave by defeating enemies and collecting hidden keys.
- Engineered responsive combat mechanics and key collection systems, with a strong emphasis on level design and challenging enemy encounters.
- Developed as a solo project over 6 weeks, with plans for additional levels and an expanded narrative.

- Currently in development as a 3D FPS action-survival game in Unreal Engine, using a mix of Blueprints and C++.
- Focused on advanced audio, dynamic combat, resource management, and survival mechanics in a zombie-infested environment.
- Features an immersive narrative where players defend themselves and an injured ally against relentless zombie waves, culminating in a climactic boss encounter.

Education

Greenwich University BA in Game Design and Development	2023–
College of North East London Level 3 IT Extended	2021–2022
College of North East London Level 2 Creative Media	2020–2021
Edmonton County School GCSE English and Maths	2015–2020

Certifications & Awards

- Duke of Edinburgh award (Bronze)
- BHF Heartstart ESL First Aid
- Practical Teamwork BTEC
- Importance of Teamwork and Leadership BTEC
- Navy Cadet

Hobbies

- **Gaming:** Enthusiastic about both retro and modern video games, always exploring game design and mechanics.
- **Hiking:** Enjoy exploring nature trails and capturing landscapes through photography.
- **Music:** Passionate about playing guitar and attending live concerts.
- **Reading:** Avid reader of science fiction and technology literature.
